When it comes to cancer treatment, top-notch treatment is crucial. At CyberKnife® Centers of San Diego, patients can rest assured they're getting the most highly developed radiosurgical care possible.

Radiation, of course, isn't a new strategy to treat cancer. But the CyberKnife® Stereotactic Radiosurgery takes the treatment into the 21st century by destroying tumors with pinpoint accuracy and extraordinarily high levels of ablative power. There's no surgery required and only a minimal risk of damage to surrounding tissue.

"It's a paradigm shift in the delivery of radiation," says Dr. Donald Fuller, a member of

## CyberKnife® Centers of San Diego

the center's experienced team of radiation oncologists. "This technology is so precise that you can treat patients who have failed previous radiation treatments and aren't eligible for further surgery. We provide patients with a potentially life-saving alternative."

CyberKnife® Centers of San Diego has the most experience in Southern California treating various types of tumors including prostate, lung, pancreas, liver, brain, spine, soft tissues, and those that failed previous radiation. Being one of the first centers in the world to install the newest and most advanced CyberKnife® system available, this state-of-the-art technology allows our doctors to mold the radiation dose even more precisely than before, while also cutting the time of each treatment by up to half.

Unlike traditional radiotherapy, which takes up to 2 months to complete, CyberKnife® treatments require only one to five visits. "The treatment is far more patient-friendly because we don't need to interrupt their lives," Dr. Fuller explains. "In addition to the convenience factor, a shorter series of radiation treatment as delivered by this device is also more biologically powerful than standard radiation treatment."

CyberKnife® Centers of San Diego has offices in Kearny Mesa and Encinitas. "Our team of talented radiation oncologists and network of oncological surgeons — among the best in the Country — has made it possible to bring CyberKnife® and other advanced cancer treatment options to our patients," Dr. Fuller says. "Our team is poised to define the next generation of cancer treatment."
